

Children's Discovery Center

Health Care Area

In the health care area, I can act like a veterinarian. A veterinarian is a doctor for animals.

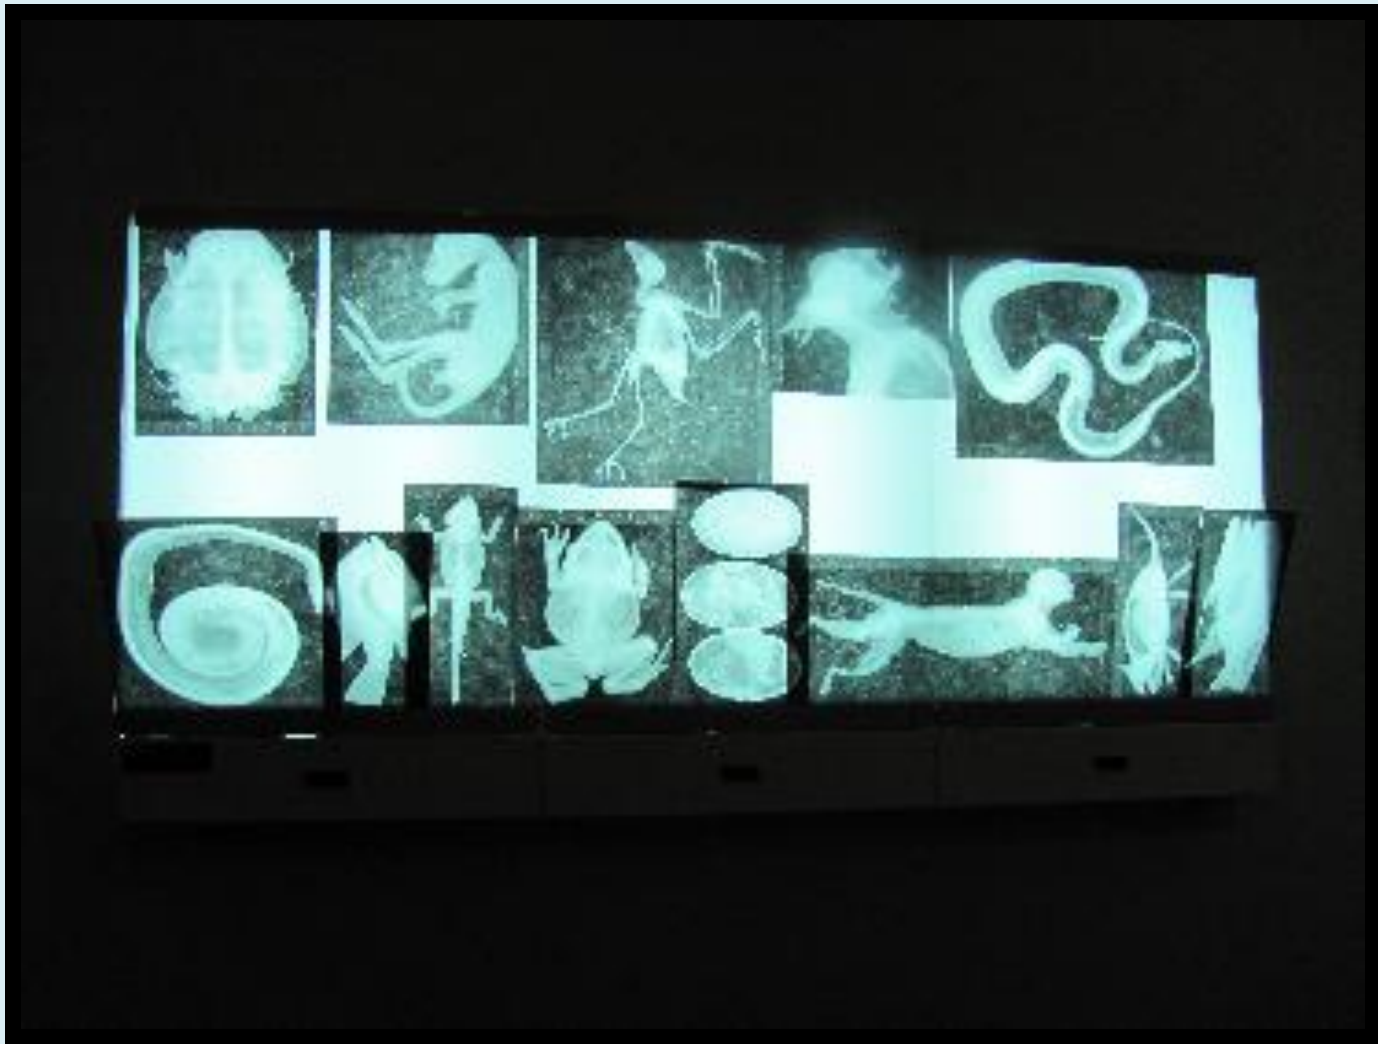

There are toy animals in cages.

I can place a toy animal on the examination table.

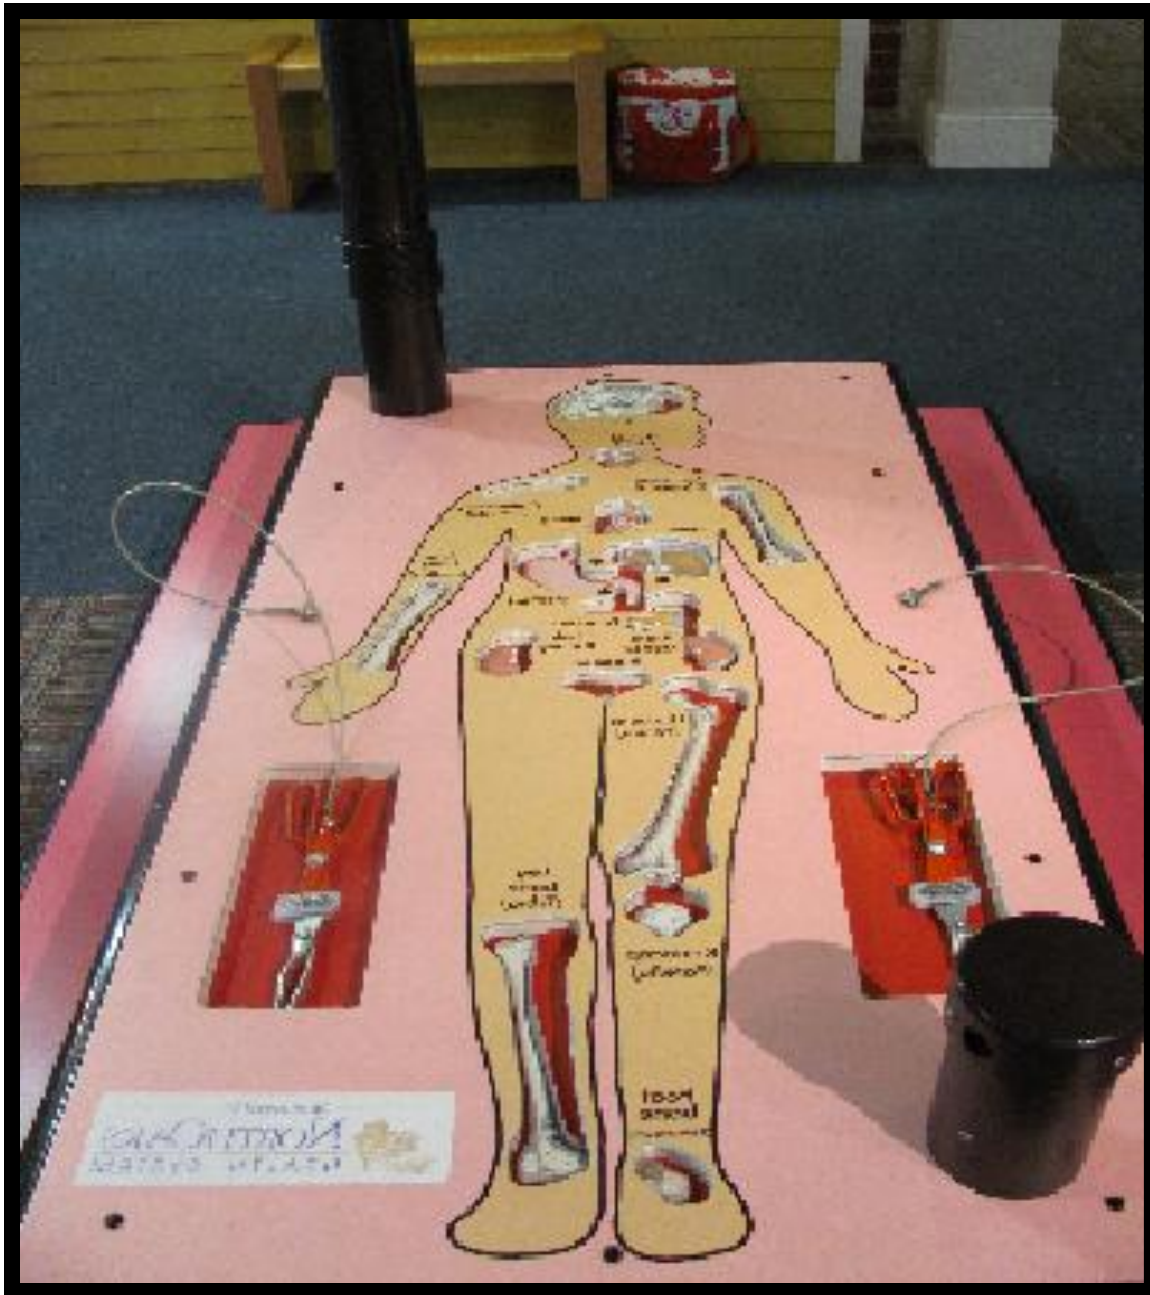

I can act like I am checking the animal.

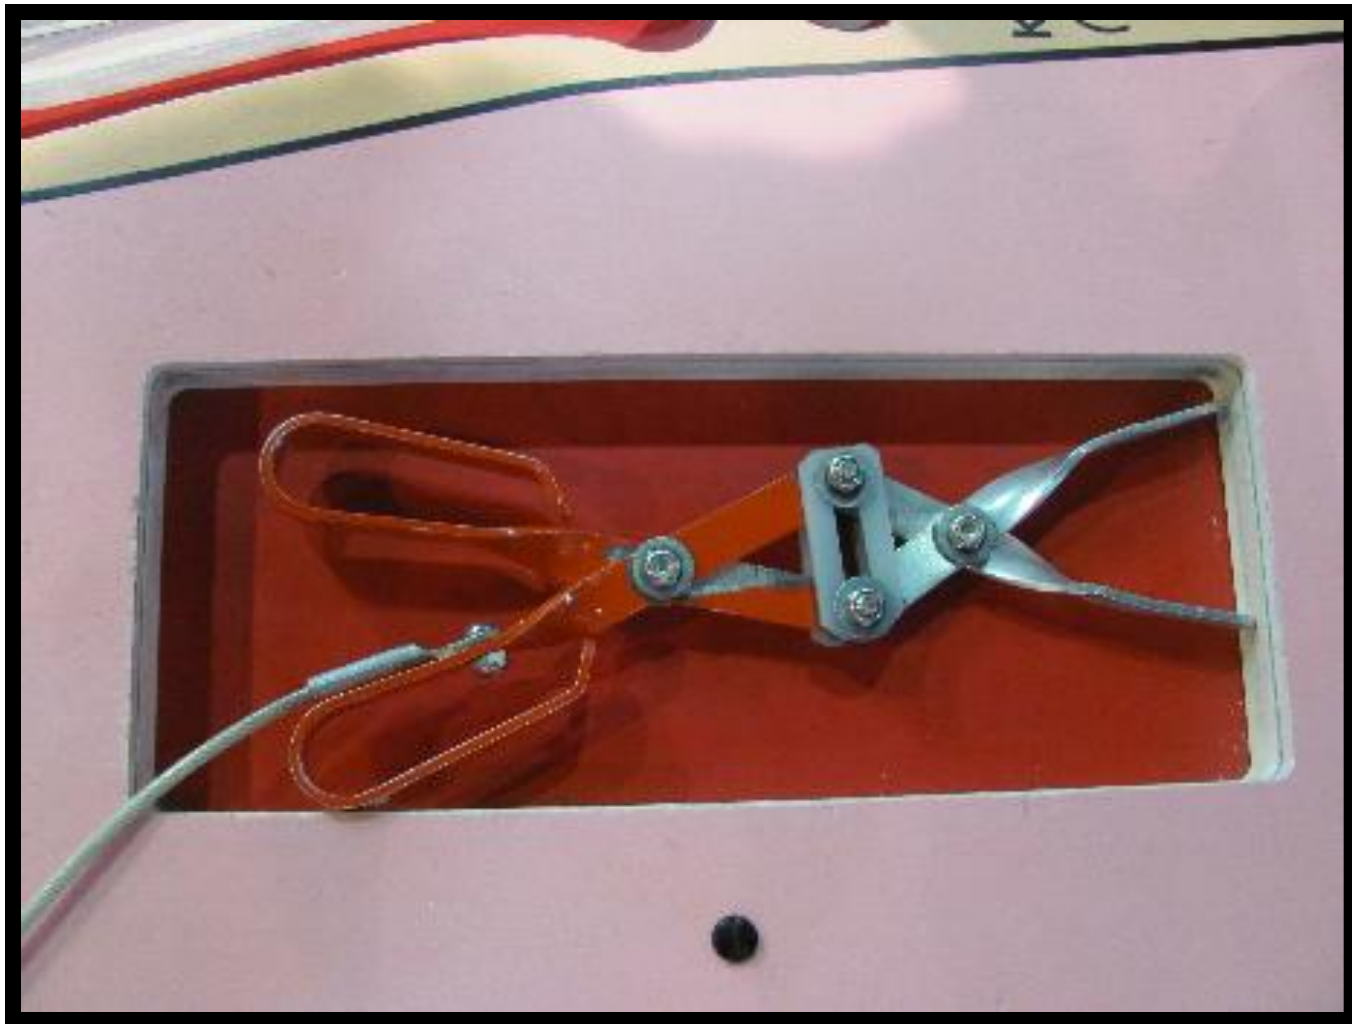

I can look at some animal x-rays.

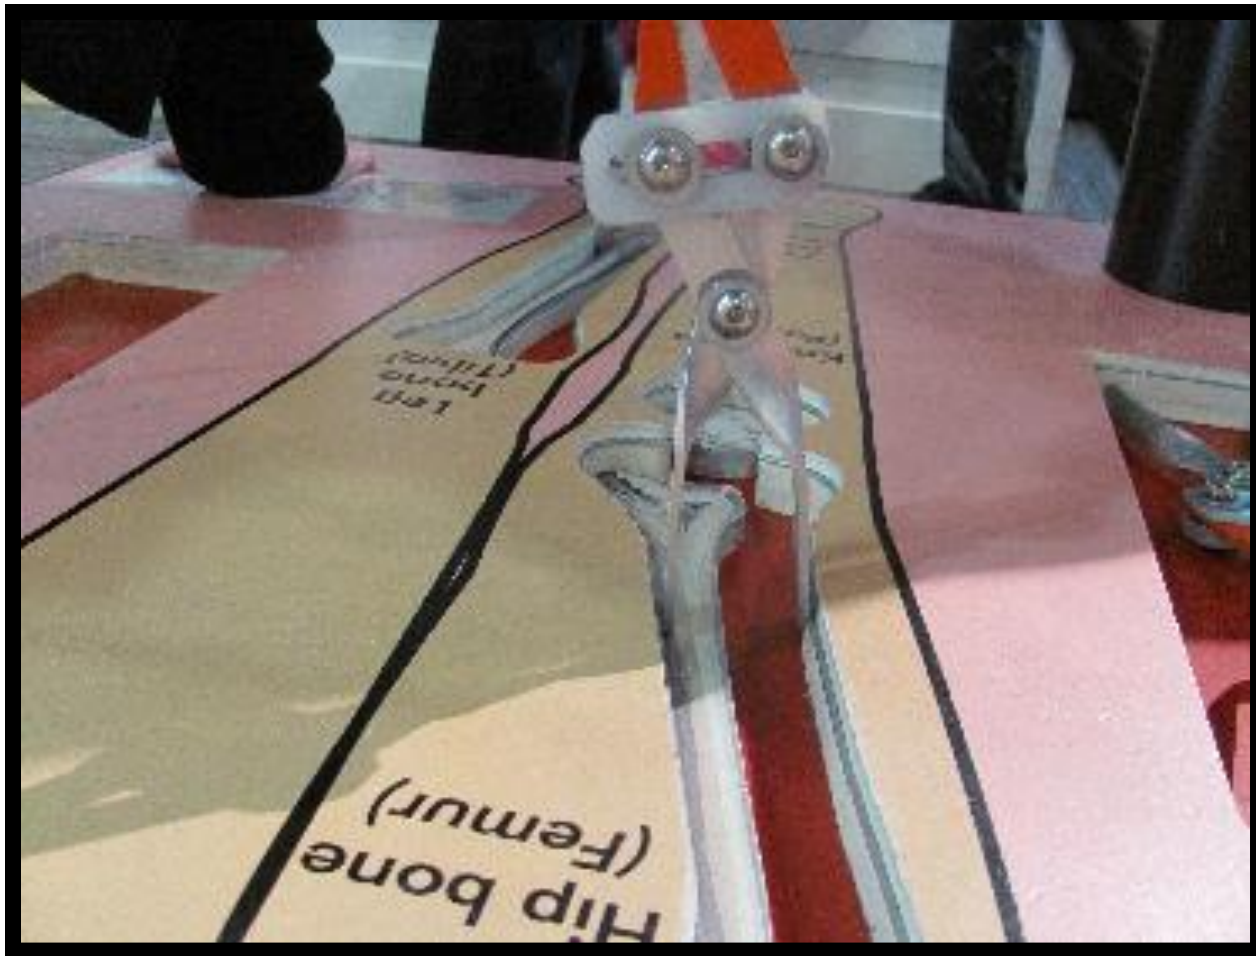

There is a big game of Operation. It has an outline of a human body. There are toy body parts in openings.

I can play with forceps. I can squeeze the handle like scissors.

I can remove a leg bone or another body part from its opening.

If I touch the edges of the opening with the forceps, there will be a buzzing noise. This noise is part of the game.

The buzzing sound comes from a speaker on a black pipe in the corner of the Operation game. It is a little bit loud, but it is a safe sound.

I can wear
some hats
and clothes
that
health care
workers
wear.

I can also do an ambulance activity in the health care area.

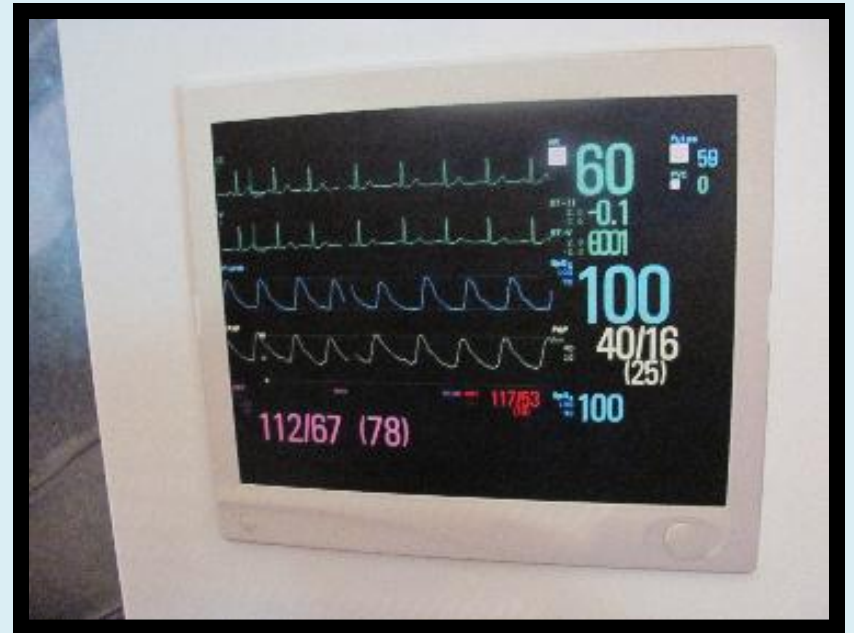

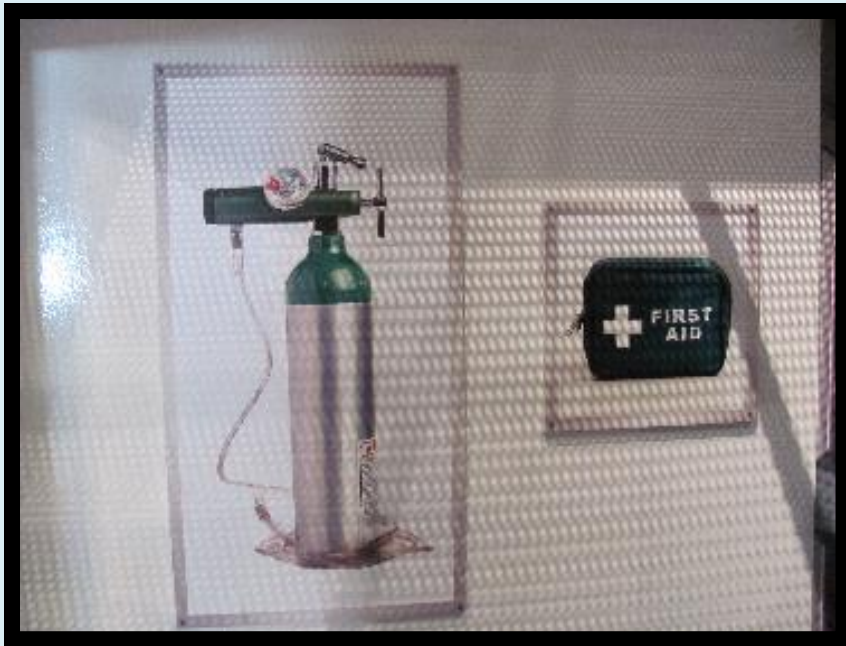

There is a model person and a toy medical kit.

The model person is made of hard plastic.

The ambulance has medical tools inside.

The ambulance has a red light that flashes and a siren that makes a loud sound.

I can control the siren and red light by pushing the big, red button.

I will be ready to see the lights and hear the siren. It is safe.

I can enjoy the
health care area
at the Children's
Discovery Center!
